AUSTRALIA'S LEADING FIGURES

A light lunch will be available at the
Racecourse on sale day.

Please join us for complimentary refreshments
after the sale.

Dear Valued Clients,

We warmly welcome you to the Saltbush White Dorper Stud 6th Annual Ram Sale.

Saltbush White Dorper Stud is one of Australia's foundation White Dorper studs and had lambs on the ground in 1997 in a partnership that also gave rise to three other studs at the time.

During this period, the breed was largely guided by the South African Typing and classing system. While this system assesses animals against the breed standard to produce well-muscled, robust and fertile sheep with sound conformation, it does not always account for the varied environments, climatic conditions and management practices faced by individual growers on their properties.

In 2007 Saltbush White Dorpers began recording genetic information and joined LAMBPLAN in 2010. We have now recorded performance data using Australian Sheep Breeding Values (ASBVs) for over 16 years. In 2022, we commenced genomic testing across the entire stud to improve the accuracy of parentage verification and predictions of genetic potential.

Every Saltbush White Dorper is visually assessed for muscling, robustness, fertility and sound conformation. We also can provide information on their genetic potential which will give you confidence that you can select sires to suit your breeding objectives. It's important that you can select sheep whose progeny will suit your environment and with a high degree of accuracy your production goals.

In 2026, Saltbush undertook an artificial insemination program to introduce genetic diversity and strengthen commercially important traits, including fertility, postweaning weight, fat and eye-muscle. Continuing to improve production and guide genetic progress in line with market demands remains at the heart of our breeding program.

The entire Saltbush Team is extremely proud of this year's sale team. A great deal of time, care and dedication has gone into preparing these rams, and we believe they represent the strength, quality and genetic progress of the Saltbush White Dorper breeding program.

We wish all bidders the very best and encourage you to bid with confidence, knowing you are investing in carefully selected genetics supported by visual assessment, performance recording and Australian Sheep Breeding Values.

We warmly invite you to attend the Saltbush White Dorper Annual Ram Sale at the Port Augusta Racecourse on Thursday, 1st of October 2026, where 120 carefully selected rams will be offered. The sale will be interfaced with AuctionsPlus. Rams will be available for inspection by appointment before the sale and from 11.00am on sale day.

We look forward to welcoming you.

Regards, The Saltbush White Dorper Team.

Sheep Genetics LAMBPLAN Australian Sheep Breeding Values (ASBVs) Explained

All Saltbush White Dorper animals are performance recorded for important production traits, as well as genotyped for pedigree accuracy and linkage for hard to measure traits like eating quality.

An ASBV is a prediction of the genetic potential an animal will pass onto their progeny. ASBVs are calculated using all the information available for an animal including their individual performance as well as that of all their relatives. ASBVs allow direct comparison between animals within and across flocks by accounting for the environmental effects that influence an animal's performance including birth type, birth date, age of dam and feedbase.

It is important to remember when selecting sires that you are selecting genes, not environment, and that visual selection is still important to ensure selection of sheep that will be functional in your commercial production system.

MWWT (Maternal Weaning Weight) (kg) – Rams with more positive MWWT ASBVs will produce daughters that wean heavier lambs. MWWT gives an estimate of the female progeny's potential for milk production and ability to provide a better maternal environment

WWT (Weaning Weight) (kg) - Rams with a more positive WWT ASBV will, on average, produce lambs that grow quicker and are heavier at weaning.

PWT (Post Weaning Weight) (kg) - Rams with a more positive PWT ASBV will produce lambs that will reach target weights in a shorter time and be heavier at 7-10 months of age.

PEMD (Post Weaning Eye Muscle Depth) (mm) - Rams with more positive EMD ASBVs will produce progeny with the genetic potential for more muscle, independent of weight, and a higher lean meat yield.

PFAT (Post Weaning Fat Depth) (mm) - Rams with a more positive PFAT ASBV will produce progeny with the genetic potential to have more subcutaneous fat at 7-10 months. Positive fat increases the ability of breeding ewes to maintain weight and condition in "tough times."

NLW (Number of Lambs Weaned) (%) – Rams with a more positive NLW ASBV will sire daughters that wean a higher percentage of lambs.

Eating Quality ASBVs

DRESS (Dressing Percentage) (%) – Rams with a more positive DRESS ASBV will produce progeny that have a higher dressing percentage at slaughter.

LMY (Lean Meat Yield) (%) – Rams with more positive LMY ASBVs produce lambs that have a higher Lean Meat Yield percentage at slaughter.

IMF (Intra-Muscular Fat) (%) – Rams with more positive IMF ASBVs produce progeny with higher levels of intra-muscular fat. IMF has a significant impact on the flavour, juiciness, tenderness and overall likeability of lamb.

SF5 (Shear Force) (kg) – Rams with more negative SF5 ASBVs produce lambs with more tender meat. Shear Force is a measure of the energy required to cut through the loin muscle of lamb after 5 days of ageing (reported in deviations of kilograms of force).

MCP INDEX (Maternal Carcase Production) – An index combines important production traits into a single value giving a useful way to quickly and easily rank animals. Each ASBV is weighted to reflect the trait's emphasis in the breeding objective. The MCP index ranks animals on their suitability for a self-replacing flock with a carcass production focus. It favours high early growth animals with good carcass and reproductive performance. The index aims to maintain adult weight at current levels.

Accuracy (%) – All quoted ASBVs are accompanied by an accuracy percentage. This is a reflection of the amount of information available for that animal for that trait. As the amount of information increases, the accuracy increases. The higher the accuracy, the closer the ASBV is to the true breeding value of the animal.

Percentile bands allow you to see where an animal ranks for a trait within the breed or across all shedding breeds. In this catalogue, animals ranked in the top 5% of all shedders nationally are highlighted in **purple**. Those in the top 10% are shown in **blue** and the top 20% in **green**.
